9363978797

Pollachi Main Road, Eachanari,
Coimbatore - 21,Tamilnadu,India

Profile

Motivated engineering student specializing in machine learning,artificial intelligence, full-stack web development, and data analysis, with hands-on experience building ML-based automation projects and responsive web applications using Python, HTML, CSS, JavaScript, and basic backend frameworks, familiar with SQL/Excel and data visualization for cleaning, analyzing, and presenting data, and eager to apply these skills to solve real-world problems in academic and industry projects

Education

✦ B.Tech Artificial Intelligence &Data Science

Karpagam Academy of Higher Education(7.69)

✦ HSC

Presentation Convent Matric Higher Secondary School (69.5)

✦ SSLC

Presentation Convent Matric Higher Secondary School (83.0)

Skills

Python | Java | C | SQL | HTML | CSS | Data Structures & Algorithms |
Machine Learning | Artificial Intelligence | Prompt Engineering

Tools & Technologies

- | | | |
|------------------------|----------------|--------------|
| • Jupyter Notebook | • Scikit-learn | • Cursor |
| • VS Code | • Numpy | • REST API'S |
| • Figma | • Rocket | • Docker |
| • Langchain/Lang graph | • MySQL | • Devops |
| • Git /Github | • MongoDB | • N8N |
| • AWS | • Replit | • Pandas |

Projects

AI Health Diagnose

This project develops a Multi-Model AI Agent for automated health diagnostics. It analyzes patient symptoms, medical data, and images to detect diseases and calculate health risks. The system provides personalized treatment suggestions and shows trends and alerts through an interactive dashboard. It aims to make healthcare faster, accurate, and easy to access for everyone.

Flood Risk Prediction System

This project develops a Flood Risk Prediction System using Python and Machine Learning to analyze factors like rainfall and river level to predict flood risk. The model is deployed using Streamlit to provide real-time predictions through an interactive dashboard.

Diabetes Prediction System

This project develops a Diabetes Prediction System using Python and Machine Learning to analyze patient health parameters such as glucose level, blood pressure, BMI, and age to predict the risk of diabetes. The system uses a Random Forest model for accurate prediction and helps support early detection and better health monitoring.

Customer churn prediction system

Churn Prediction is a Machine Learning project that predicts which customers are likely to leave or stop using a company's service helps businesses identify at-risk customers before they actually churn

Certificates

- » Advanced Diploma in Java Programming
- » HackImpact 2025 – Final Round Shortlisted
- » Acquiring Data – IT-ITeS SSC NASSCOM
- » R Language
- » Artificial Intelligence using Microcontroller – Skill Development Program(2026)
- » Universal Human Values (AICTE)

Professional Experience

- **Pantech e-Learning** : Full Stack Web Development
- **CSC** :Advanced Diploma in Java Programming

Soft Skills

-  Problem Solving
-  Analytical thinking
-  Event Management & Coordination
-  Adaptability & Critical Thinking
